To maintain and increase market value, the Company aims to identify and manage risks, and to take advantage of opportunities at the same time. With effective corporate risk management in place, developing shared perspectives and strategies across the Company remains the focus point.

Financial risks arising from uncertainties and fluctuations in foreign exchange, interest rates, liquidity and commodity prices are identified and evaluated and when necessary, relevant instruments are used to mitigate risks. Foreign exchange risks originate from purchases in foreign currencies regarding business activities or loans utilized in foreign

currency for liquidity purposes. This risk is mitigated by the "natural hedge" that is created by reflecting exchange rate fluctuations on product sales prices and the foreign exchange position exposed to currency risk after the inventory within the said natural hedge is closely monitored and effectively managed. The risks are restricted and kept within targeted limits by forward or derivative transaction agreements when necessary.

The interest rate risk shows its effects on rate-sensitive assets and liabilities. The negative effects of interest rate risk are eliminated balancing financial debts in terms of fixed/variable interest rates and short term/long term maturities.

Liquidity risk is managed by closely monitoring current and projected cash flows and ensuring maturity match between assets and liabilities. Net working capital is closely monitored to preserve short-term liquidity, and sufficient level of cash and cashlike assets are maintained against potential capital market fluctuations. Consequently, working capital needs and liquidity risks are minimized. The Company's policy is to manage longterm liabilities with fixed-interest rates with flexible structures and to hedge the potential interest rate risks through derivative instruments. Available cash and non-cash credit lines are determined with the banks.

In terms of commodity risks, derivative transactions are performed on operational inventory in order to limit the impact of price fluctuations in international markets.

Given its broad range of activities, Aygaz's receivables are spread across different industries and geographical regions through numerous dealers and customers. Concentrating on a specific field or a customer is avoided. Commercial receivables are monitored closely with regular reporting and assessments, taking care to keep customer credit risk exposure arising from commercial receivables within approved limits.

Collaterals (letters of credit and guarantee performance bonds, pledges, etc.) are held to mitigate collection risks and risks are checked on transaction basis and the said collaterals are followed systemically. Payments are received via banking systems. The use of various payment systems also helps facilitating the collections and reducing the risks.

In terms of capital risk, the Company's objective is to carry out business with the most efficient capital structure that minimizes the cost of capital while creating value for its shareholders. The most significant indicators considered for this purpose are the ratios of Net Financial Debt/EBITDA, Total Financial Debts/ Equity, Current Ratio and Liquidity Ratio, as well as maturity structure of Financial Debt and Net Working Capital. With all these indicators within the required limits, Aygaz A.Ş. has the capital structure and debt capacity to conduct its business in a healthy manner.
